

1. Introduction to Seismology

M. Ravasi

ERSE 210 Seismology

Course Objectives

- Learn fundamentals of Seismology, both Global and Exploration
- Familiarize with theory of wave propagation (basis for ErSE 326 and 390N)
- Recent developments in the field (last 20 years)

Lectures

- Monday 3:00pm 4:30pm
- Wednesday 3:00pm 4:30pm
- Bldg. 9, Room 4137 (Theory) / ~~Bldg. 9, Room 2220 (Labs)~~

! Be on time: participation is recorded !

Teaching Staff

Instructors:

- [Matteo Ravasi](#) - Office Hours: Tuesday 4pm to 5pm
(by Appointment: Zoom or Office - BI-1432)

Textbook

- Shearer, P., Introduction to Seismology (**Main reference**)
- Aki, K., and Richards, P.G. ,Quantitative Seismology
- Avseth, P., Mukerji, T., and Mavko, G., Quantitative Seismic Interpretation
- Ikelle, L.T., and Amundsen, L., Introduction to Petroleum Seismology
- Yilmaz, O., Seismic Data Analysis

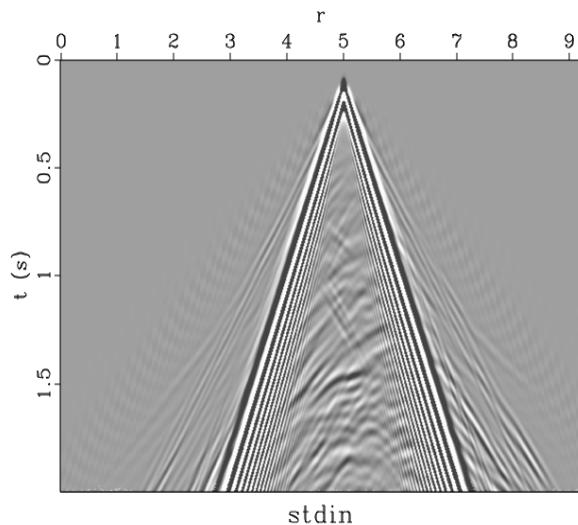

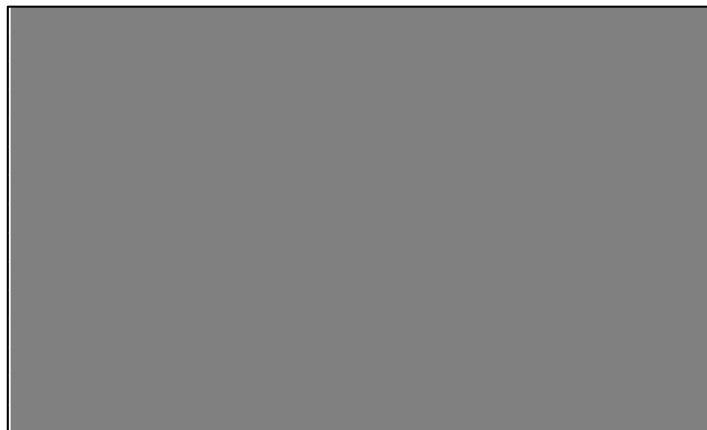

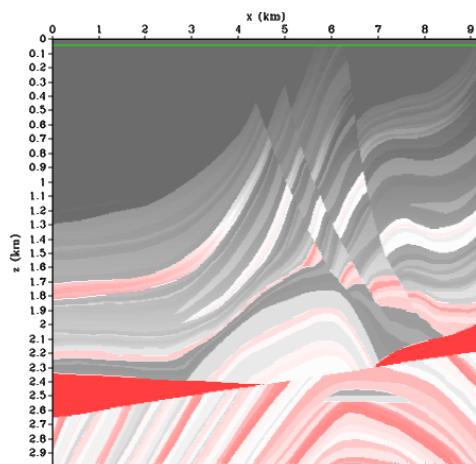

Course material

- Slides and Laboratory exercises can be accessed from:

<http://github.com/dig-kaust/seismology>

What is Seismology?

“Field of study of **propagation of elastic waves**”

What is Seismology?

“Field of study of **propagation of elastic waves**”

Earthquakes

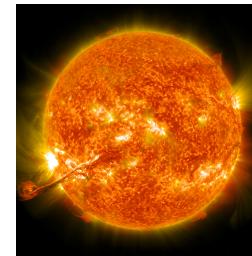

Volcanoes

Tsunamis

GLOBAL

Sun (helioseismology)

Stars (asteroseismology)

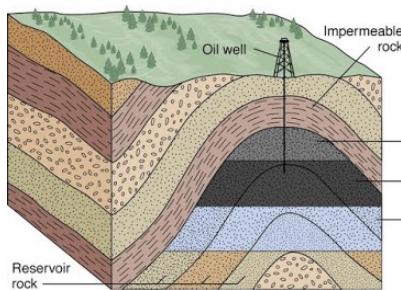

Planetary bodies
(planetary seismology)

What is Seismology?

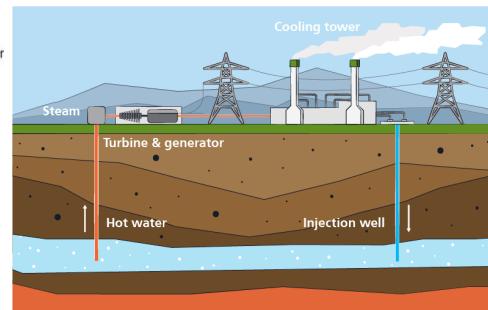

“Field of study of **propagation of elastic waves**”

Hydrocarbon prospection

APPLIED

CCS

Geothermal

Geotechnics

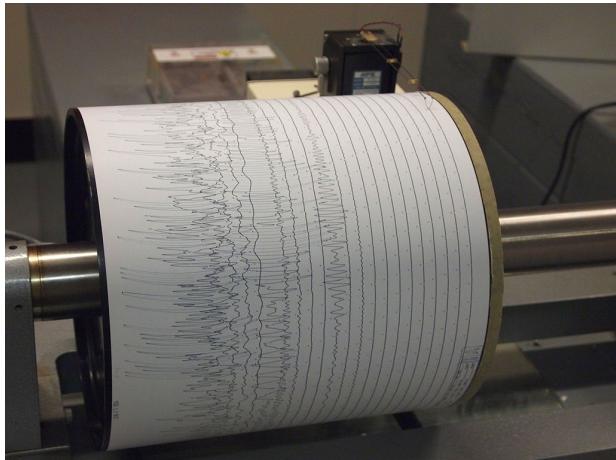

Nuclear Explosions

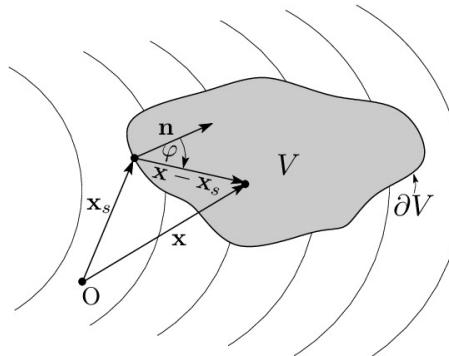

Transportation monitoring

How do we learn about waves?

OBSERVATIONS

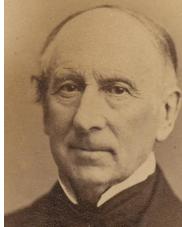

THEORY

EXPERIMENTS

History of global seismology

Cauchy

Stokes

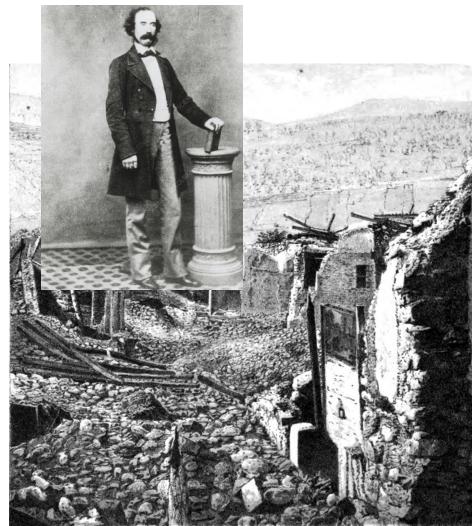

Rayleigh

1800s: early **theories** of elastic waves

Mallet

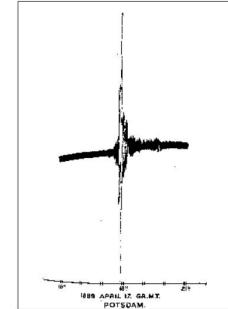

1857: Napoli earthquake – beginning of **observational seismology**

Cecchi

1875: First time-recording **seismograph**

This seismogram was recorded in Potsdam in 1889. The seismic waves were generated by an earthquake in Japan.

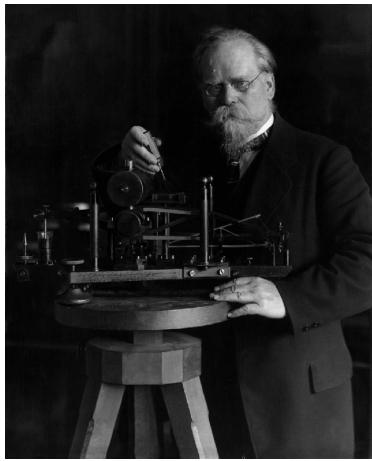

1889: First recorded **teleseism**

History of global seismology

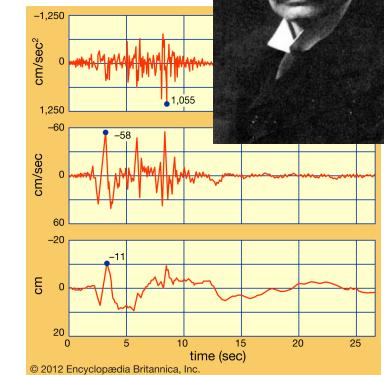

1897: First seismograph in US: will record S.Francisco earthquake in 1906

Wiechert

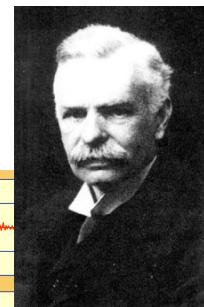

1898: First seismometer with viscous damping

1906: First P, S, and surface waves identified on seismogram

Oldham

Zoeppritz

Gutenberg

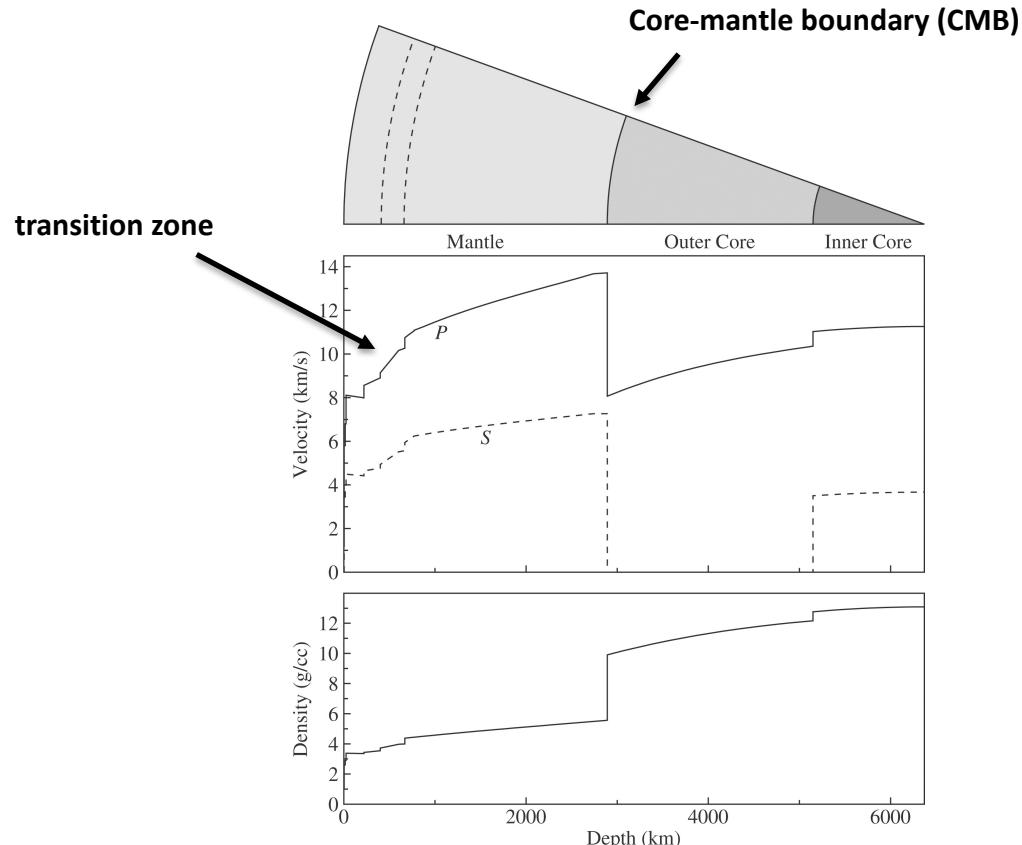

190

TABLE 2
CALCULATED TRAVEL TIMES

	P _{PP}	P _{PS}	S _{PS}	P _{SS}	S _{SS}
sec/deg.	deg.	sec.	deg.	sec.	deg.
0.000	180.000	1201.06	180.000	1116.09	180.000
2.310	146.345	1186.40	142.778	1393.77	1381.01
2.310	146.345	1186.40	142.778	1393.77	1380.38
2.383	146.688	1185.96	141.538	1391.56	1381.98
2.446	145.138	1185.73	141.031	1389.61	1383.98
					1365.50
2.510	147.610	1189.49	140.941	1387.05	1382.37
2.574	147.109	1181.14	139.470	1385.69	1381.81
2.638	146.657	1179.92	138.719	1383.74	1380.81
2.701	146.198	1178.74	137.987	1381.78	1379.70
2.765	145.761	1177.00	137.276	1379.83	137.771
					1362.07
2.828	145.400	1176.54	136.568	1377.01	137.772
2.892	145.063	1175.56	136.178	1376.54	137.545
2.955	144.740	1174.08	135.274	1374.11	1378.80
3.018	144.466	1173.82	134.654	1372.27	1381.81
3.082	144.231	1173.10	134.059	1370.45	138.86
					1367.90
3.145	144.040	1172.30	133.491	1368.68	132.942
3.208	143.894	1172.05	132.305	1366.97	132.009
3.271	143.785	1171.98	132.142	1366.37	131.970
3.334	143.757	1171.98	131.966	1363.74	131.176
3.397	143.765	1171.08	131.520	1362.25	131.275
					1362.87
3.460	143.841	1171.89	131.113	1369.85	118.365
3.523	143.985	1172.38	130.746	1359.56	117.807
3.586	144.205	1173.17	130.422	1358.41	116.638
3.649	144.425	1173.96	130.148	1357.26	115.366
3.711	144.913	1175.78	129.924	1356.59	114.994
					1357.42

1900-1950: Traveltime tables of earthquake arrivals

Earth interior

Crust: ~6km to 30-50 km thickness

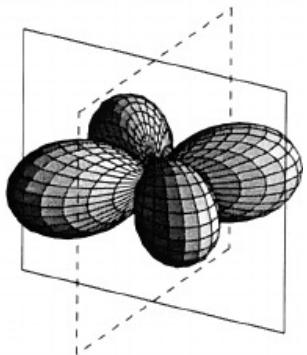

Interior:

- Mantle: solid outer shell (84% volume) with rapid velocity increase at the start (transition zone) and then gradually up until CMB
- Outer core: drastic drop in velocities at CMB due to solid-to-fluid transition ($VS \rightarrow 0$), followed by slow velocity increase
- Inner core: solid, small increase in P-wave velocities and non-zero S-wave velocities

Density is less understood as traveltimes do not provide direct constraints.

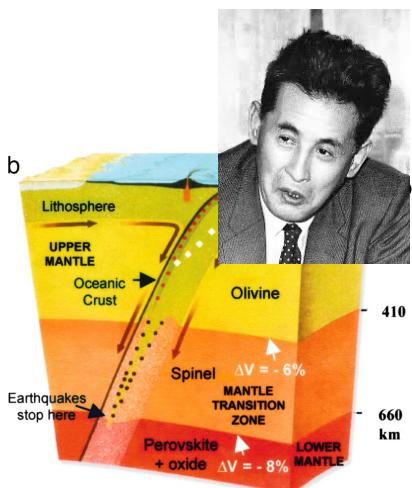

History of global seismology

Nakano

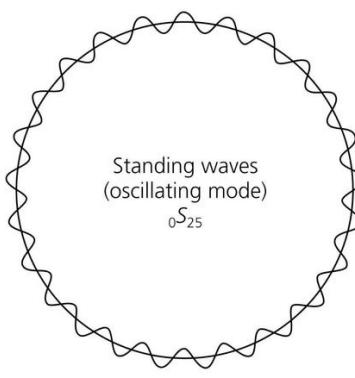

1923: Theory of **double couple source** (i.e., how earthquake originates)

Wadati

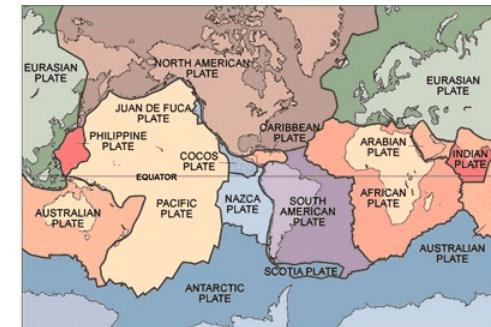

1928+: Evidence of **deep earthquakes** (>100km)

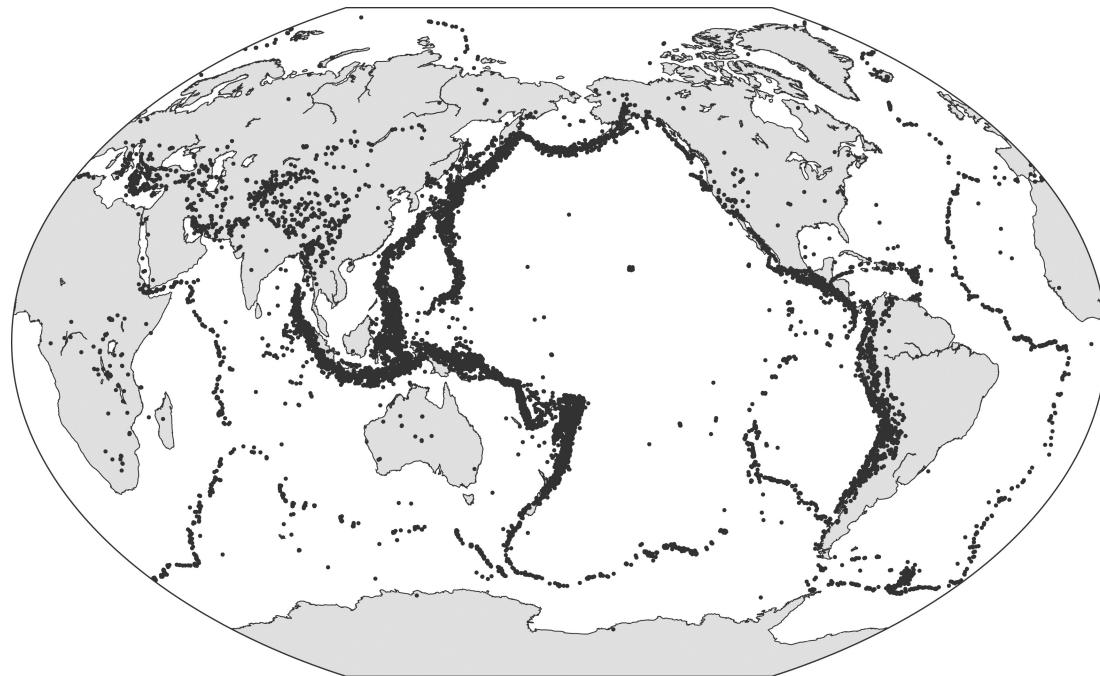

A few hours after
the earthquake

1960: Discovery of **Normal modes** from Chile earthquake

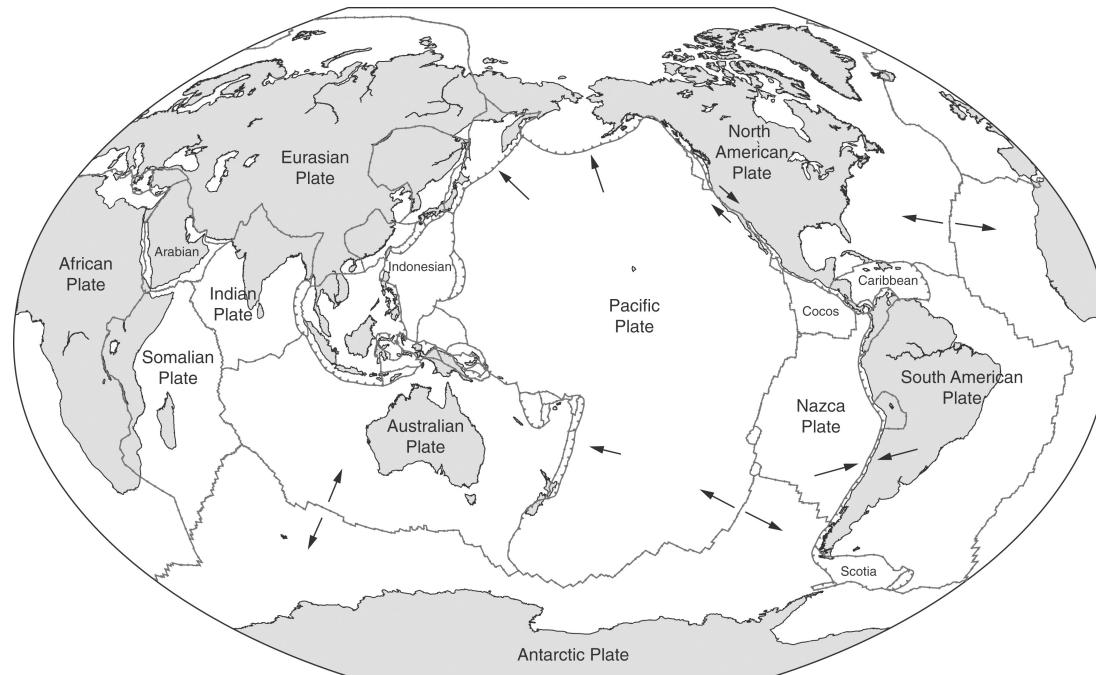

1960: Theory of **plate tectonics**

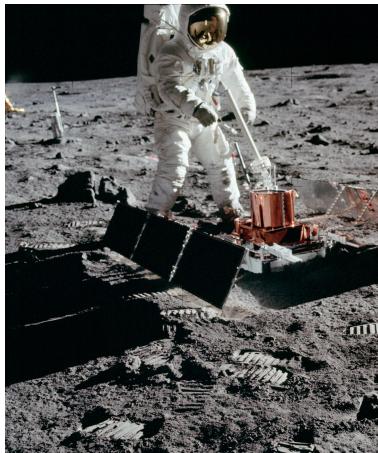

Seismology role in plate tectonics theories

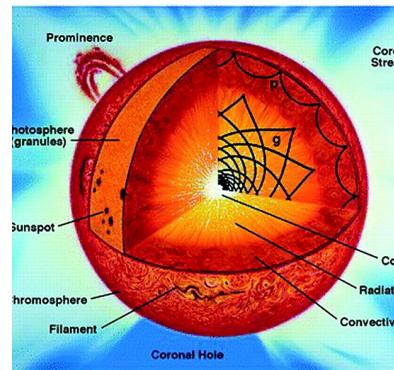

Seismology role in plate tectonics theories

History of global seismology

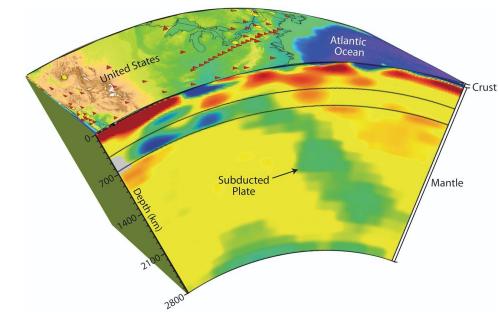

1961: Seismometers
on **Moon**

1960/70: **Helioseismology**
(Doppler shift similar to
normal mode theories)

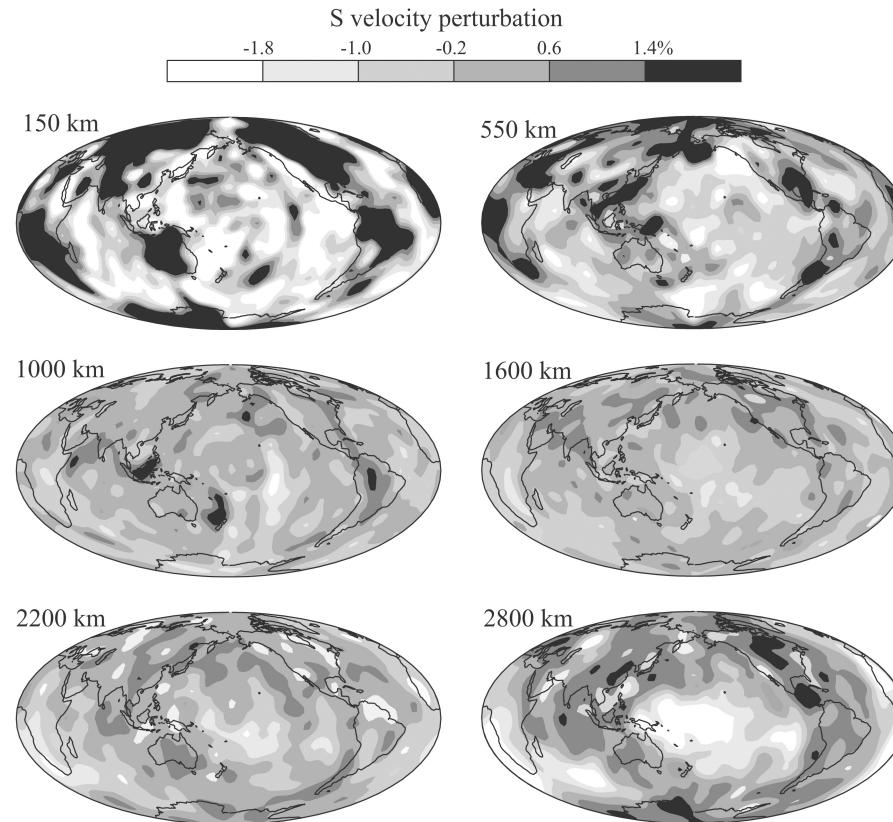

1970: Advent of
computers, better
modelling and storage
solution

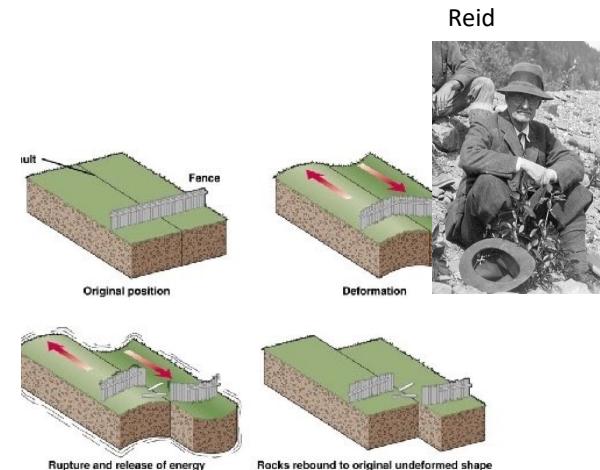

1970/80: Early
successes in **seismic
tomography**

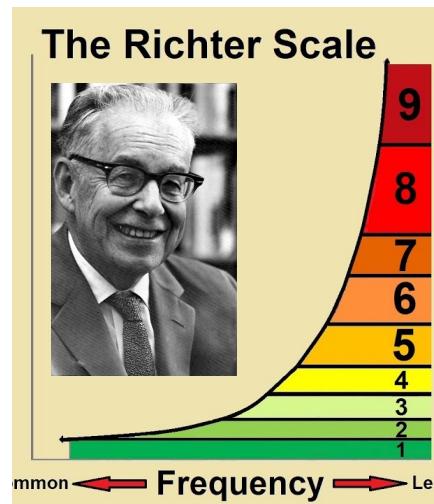

Tomographic images of the Earth

History of earthquake physics

1906: Elastic
rebound theory

1935: Richter scale

$$M_0 = \frac{1}{\sqrt{2}} (M_{ij}^2)^{1/2}$$

1966: Seismic moment
and moment magnitude

History of applied seismology

Mintrop

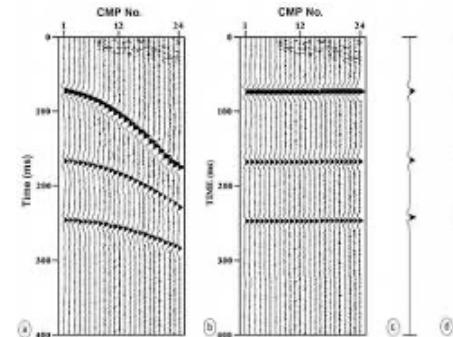

Fessender

1914 and 1917:
Refraction and reflection seismology
was first conceived
(and patented)

1920/30: First oil discoveries in US and Mexico using seismic methods

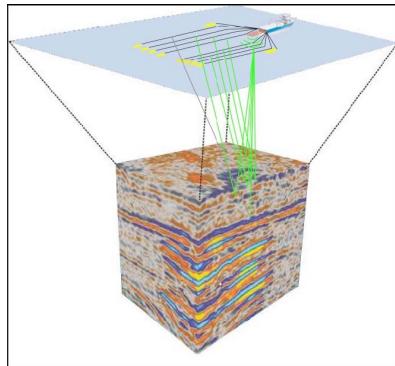

1956: **CMP stacking** was invented and patented

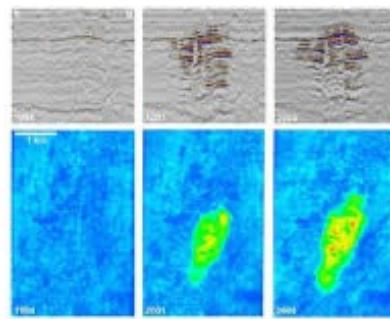

1950s: **Vibroseis** were introduced to replace explosive sources

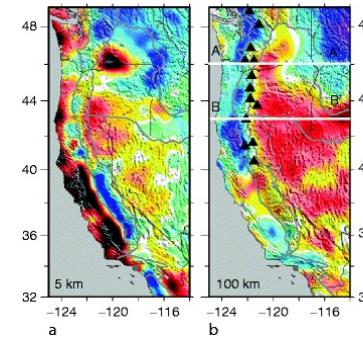

History of applied seismology

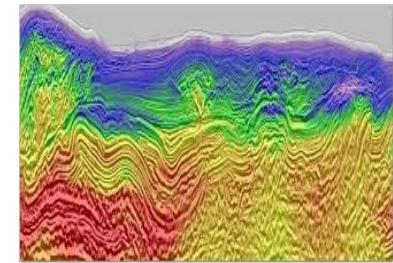

1970s: **3D** seismic was first introduced

1980: **4D** seismic was first introduced

2000': **Ambient noise** is first shown to carry information about subsurface properties

2000'2010': **Full-waveform-inversion (FWI)** takes off
